# CLASS DESCRIPTIONS

ALL JR. HIGH CAMPS ARE APPROPRIATE FOR GRADES 6-8

**Introduction to Coding** - Coding and computer science are some of the most essential skills of the digital age. This session will introduce your child to coding platforms such as Code.org, Hopscotch, Lightning Lab, Scratch, Enchanting, and Code Combat.

**Advanced Coding** - If you like video games and you completed the Basic Coding Camp, this is the camp for you. Students will build on the knowledge and skills they learned in the Basic Coding Camp to “kick things up a notch ... BAM!” Students will use a multi-platform game engine, such as the Unreal Gaming Engine by Epic Games, to explore the world of game development.

**Beginner Robotics** - Students will be introduced to the basics of building Lego NXT robots and basic programming using Mindstorms.

**Advanced Robotics** - Students will refine their skills in building Lego robots and learn advanced programming. *Note: Students should only enroll in this camp session if they know basic programming using Mindstorms and HAVE previously participated in a NXT or EV3 robotics class/club/camp.*

**Creating Art Outside the Bubble** - Student artists will explore and experiment with fun new processes to create original works of art using watercolor, chalk pastel, markers, paint, cut paper, printmaking, sculpture, and more!
